Art Unit: 1731

In view of Applicant's arguments in the Brief that the reactive system of KLUNGNESS et al or Doelle are not combinable with Green et al, the rejections based on these references have been dropped and the following new rejections given:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-19 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Green with HANSEN (4,055,903) or CARLSMITH (5,810,973) to show inherency.

GREEN et al teach adding calcium carbonate solid particles (column 4, lines 59-61) to load paper pulp with the calcium carbonate filler and teaches that the pulp should be subjected to mechanical treatment in a refiner (column 4, lines 3-5) or disintegrator (column 6, lines 33-39). Such mechanical agitation would inherently fluff the pulp. HANSEN or CARLSMITH show that disintegrators ((column 4, lines 54-55) or refiners (column 1, lines 58-59) fluff the pulp.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over GREEN et al in view of HANSEN (4,055,903) or CARLSMITH (5,810,973).

If the fluffing of pulp is not inherently taught by GREEN et al, then it would have been obvious that the refiner and/or disintegrator of GREEN et al would be fluffing the pulp as taught by HANSEN (4,055,903) or CARLSMITH (5,810,973).
